

Curriculum Vitae

Christian Thams

Mechanical designer and product developer with 10 years spanning premium consumer electronics and regulated medical devices. Brought SOUNDBOKS 3 to high-volume production — leading the final design and DFM phase of SOUNDBOKS 3 — shaped concept briefs and prototypes for Beocreate and Beosound Halo at Bang & Olufsen, and led a Class IIa medical device from concept to 100 clinical-study-approved devices as CPO at UVISA Health. Works across parametric CAD in SolidWorks and Creo to hands-on prototyping in 3D printing, CNC, lathe, and milling. Native-level Swedish and English; fluent Danish.

Chief Product Officer • Mechanical Designer

UVISA Health, Copenhagen, Denmark

Feb 2024 – Jan 2026

- Led product development for a Class IIa medical device as sole mechanical designer — designing plastic injection-moulded housings, machined components, and PCB enclosures from first sketch to supplier-ready drawings in SolidWorks and Creo under EU MDR and ISO 13485.
- Co-developed a 50+ document design history file — technical specifications, SOPs, risk assessments (ISO 14971), and traceability records under IEC 60601, IEC 62304, and IEC 62366 — with zero major findings at clinical study submission.
- Passed IEC 60601 EMC and electrical safety testing at an accredited external test house by authoring all test SOPs and conducting full in-house pre-testing, removing the need for an external consultant.
- Kept 4 engineering disciplines — embedded software, application development, QA/RA, and manufacturing partners across Europe and Asia — aligned from specification through clinical production, delivering 100 approved devices on schedule without a dedicated project manager.
- Owned project timelines and budget, reporting directly to CEO, CSO, and board — translating technical design risk into decisions that protected both schedule and regulatory compliance.

Open-Source Hardware Consultant

Danish Design Center, Copenhagen, Denmark

Sep 2021 – Aug 2022

- Designed open-source hardware development toolkits and facilitated workshops for companies in the EU-funded OpenNext programme — adapting design methodologies to each client's context and surfacing actionable product opportunities.
- Managed the DDC sub-team within a multi-partner EU project, keeping deliverables on schedule across organisations with

Tjørnegade 6, 2TV
2200 Copenhagen
Denmark

12th February 1988

Languages: Swedish (native),
English (native), Danish (fluent)

Citizenship: Norway / Canada

Education

MFA, Industrial Design
Lund School of Industrial Design
2013 – 2015

Industrial Design Intensive
Umeå Institute of Design
2012 – 2013

BSc, Product Design Engineering
University of Skövde
2009 – 2012

Skills

CAD

SolidWorks, Creo, Fusion 360,
OnShape, Rhinoceros 3D, FreeCAD

Computational Design

Generative design, evolutionary
optimisation, FreeCAD (Python)

Regulatory

EU MDR, ISO 13485, ISO 14971,
IEC 60601 / 62304 / 62366

Prototyping

3D printing, CNC, lathe, milling,
laser cutting, band saw

Manufacturing

Injection moulding, CMF,
DFM/DFMA, QC documentation

Visualisation

KeyShot, Blender, Adobe CC

different working methods.

Design Specialist

SOUNDBOKS, Copenhagen, Denmark

Sep 2018 – Sep 2019

- Joined SOUNDBOKS 3 mid-development and led the final design and DFM phase to consumer launch — finalising plastic and structural components, producing CMF/DFMA/QC documentation for manufacturing suppliers, and developing the physical-to-app UX strategy. The product is now used by over 100,000 customers worldwide.

Concept Manager

Bang & Olufsen, Copenhagen, Denmark

Jan 2015 – Aug 2018

- Originated the Beocreate concept at Bang & Olufsen — ran internal and external hackathons, co-developed a modular audio platform with HifiBerry that launched globally, and directly influenced B&O's subsequent Recreated and Reloved product lines.
- Delivered concept briefs and validated user requirements for two commercially shipped products — Beocreate and Beosound Halo — coordinating external designers and manufacturers over 3.5 years while holding every decision to B&O's benchmark for design integrity, function, and perceived quality.
- Iterated 3D-printed prototypes for Beocreate in close coordination with external designers and manufacturing partners, compressing feedback cycles while ensuring design intent survived into physical production.
